

WARP KNITTED FABRIC FOR ZIPPER MOUNTED THEREON

ABSTRACT OF THE DISCLOSURE

A warp knitted fabric for a zip mounted thereon has a base fabric having first
5 threads, second threads and third threads, wherein the first threads are extended along a
warp-wise orientation of the base fabric to form wales and are lapped to form crochets
and the second and the third threads are extended along the warp-wise orientation of
the base fabric and are repeatedly and cross lapped over two of the wales. The base
fabric has a rare portion, which is a region of the base fabric having less of the third
10 threads than the other region thereof. The base fabric further has fourth threads, which
is made of a material with a well elasticity, to form an elastic portion. The elastic
portion has a side overlapped with a portion of the base fabric on which the third
threads are knitted to form an overlapped portion.
